from New York to Rio's Carnival in a 1973 Cadillac hearse--15,000 miles of war zones, beautiful women, corrupt cops, narco-gansters, Marxist guerrillas, cheap cocaine, and bad food. It's the anti-travelogue of the year!

Johnson Evinrude Service Manual

Established in 1958 in response to Russia's Sputnik 1, launched on 4 October as the world's first artificial satellite, NASA - the National Aeronautics and Space Administration - emerged out of the National Advisory Committee for Aeronautics which had been formed in 1915. The NASA Operations Manual tells the story of America's civilian space agency, the facilities it operates, where they are and what they do. It explains how much NASA costs the American taxpayer and looks at what it returns to the taxpayer in benefits to the economy. NASA has forged a niche in modern history that extends beyond the realisation of age-old dreams to leave Earth and explore the heavens - it has become a synonym for achievement, performance and greatness, in setting goals and achieving them, in failing and learning how to recover, in connecting people around the world with international programmes to explore our solar system and live our ambitions, and in improving the lives of people everywhere through its inventions, discoveries, its technology and its engineering. Sixty years after NASA took hold of the reins of US civilian space programmes, the agency has a bold vision for great and ambitious goals, taking humans back to the Moon and on to Mars, perhaps visiting an asteroid, or setting up an interplanetary transport system on the way. And all the time, providing inspiration for a new generation. With more than 300 photographs, line drawings and charts, this book tours the United States, describing the centres of excellence and the facilities where rockets are tested, satellites are built and humans prepare for space. With summary review of research laboratories, test rigs, experimental platforms and engineering facilities, this book describes the 60 years of NASA as it has evolved through changing requirements and expanding capabilities, building on the past and preparing for a bold future.

Soon after moving to the secluded Norfolk village of Munding, Alex Darken has a disturbing encounter with the ageing poet Edward Nesbit and his young lover Laura. They are obsessively researching the lives of Sir Henry Agnew and his daughter Louisa who lived in Munding in the nineteenth century and were deeply engaged in alchemical practices. By recovering the lost secret of the hermetic mysteries, Edward and Laura hope to find an alternative to the destructive materialism of the post-industrial world. Once drawn into their fervent quest for knowledge, Alex finds himself entangled in a passionate and intense intrigue that reaches across two centuries. A beautifully written, ambitious and captivating novel, which takes a profound look at issues of nature, human existence and forgotten knowledge, *The Chymical Wedding*, which won the 1989 Whitbread Prize for Best Novel, is already considered a classic for its stylistic prowess and philosophical resonances.

The Burial Brothers

Think of the First World War and then think of an aircraft. What springs to mind will probably be the Sopwith Camel. The single-seat Camel was one of the most successful RNAS/RFC/RAF 'scouts' (the period term for a fighter) of the First World War. Jarrod Cotter has been given rare access to the Shuttleworth Collection's Sopwith Camel replica as well as Camel new-builds in France and New Zealand. The manual includes rare and stunning colour photography of rebuilding, restoring and flying this classic WW1 fighter.

The Ferrari 312T is one of Ferrari's most iconic F1 cars, and was the car with which Niki Lauda battled against James Hunt for the 1976 World Championship - the subject of the recent Hollywood blockbuster *Rush*.

Baby Owners' Nurture Manual

A unique Haynes Manual, providing fascinating technical insight into the development and use of rocket planes, focusing on the iconic X-15, which carried out much of the development work for the Apollo and Space Shuttle space programmes. As of July 2015, the X-15 still holds the world record for the highest speed ever attained by a manned aircraft, at 4,520mph (Mach 6.72)! The X-15 was flown by a band of elite test pilots, including the first man to walk on the Moon, Neil Armstrong. The X-15 made 199 flights between 1959 and 1968, several of which were above the line considered to be the arbitrary altitude where space begins. The engaging text, extensively illustrated with period photographs and technical illustrations, explains how the vehicle worked, what it pioneered for future applications in more conventional aircraft and manned spacecraft developed by NASA from 1958, and what it was like to fly.
